electricity gets from generating stations to customers. It covers all facets of an electrical system: transmission, substations, overhead distribution, underground distribution, metering, and street lights. Industry terms are introduced gradually, and accompanied by hundreds of informative illustrations.

The distribution of electric power to different consumers is done with a much lower voltage level compared to the transmission of power over long distances (i.e. over long transmission lines). Distribution of electric power is done through distribution networks. Distribution networks consist of following parts: Distribution substation
