Introduction: Bioinspired and Biomimetic Materials

Moving beyond biomimetic and bioinspired materials, bioinspiration and biomimetic approaches are finding numerous applications in the smart design of advanced devices such as chemical and biological sensors, actuators, photonics and plasmonic devices, and flexible electronic devices. (15-17) A review by Tsukruk and co-workers describes the design, synthesis, and application of hierarchical nanostructures for biological sensors.

Biomimetic materials are synthetic (man-made) materials that mimic natural materials or that follow a design motif derived from nature. In the previous section, a number of peptides and proteins were discussed. In general, peptides and proteins are isolated from natural sources and are therefore listed
