## **Cell Transport Lab by Shelby Coniglio - Prezi**

The movement of water molecules across the semi-permeable cell membrane is called osmosis. In osmosis, we only concern ourselves with the movement of water molecules (H<sub>2</sub>O) across the cell membrane. As we saw in diffusion, molecules will travel from an

## **LAB . CELL MEMBRANES - Explore Biology**

Transport across the Cell Membrane One of the great wonders of the cell membrane is its ability to regulate the concentration of substances inside the cell. These substances include ions such as  $\text{Ca}^{++}$  ,  $\text{Na}^{+}$  ,  $\text{K}^{+}$  , and  $\text{Cl}^{-}$  ; nutrients including sugars, fatty acids,

## Access Free Cell Membrane Transport Lab Answers

and amino acids; and waste products, particularly carbon dioxide ( $\text{CO}_2$ ), which must leave the cell.

### **Membrane Transport | Anatomy and Physiology**

Passive transport is the movement of substances across the membrane without any input of energy by the cell.

## Access Free Cell Membrane Transport Lab Answers

Active transport is the movement of materials where a cell is required to expend energy. In the case of this lab the discussion will be centered on passive transport. The simplest type of passive transport is diffusion. Diffusion is the movement of molecules from an area of higher to an area of lower concentration without any energy input.
