Colligative Properties Of Solutions Lab

Colligative properties are the properties of solutions that depend on the TOTAL concentration of solute particles in solution. The list of colligative properties

Read Book Colligative Properties Of Solutions Lab Answers

includes: a) lowering vapor pressure above a solution; b) freezing temperature depression; c) boiling temperature elevation; d) osmotic pressure. These properties depend only on the TOTAL CONCENTRATION OF ALL THE SOLUTE PARTICLES IN THE SOLUTION and completely ignore the chemical origin of solute species.

Experiment on Colligative properties

COLLIGATIVE PROPERTIES are solution properties that depend on the NUMBER of particles. As we can see, different substances dissolve differently with respect to the number of particles. There are 4 important solution properties that

depend on this colligative principle.

Properties of Solutions

Colligative properties of solutions are properties that depend upon the concentration of solute molecules or ions, but not upon the identity of the solute. Colligative properties include vapor pressure lowering, boiling point
