Marine Diesel Engine Troubleshooting

The best mechanics call heavily on experience, a thorough knowledge of diesel theory and most of all the ability to think logically when troubleshooting a sick diesel. This text version of the Troubleshooting Guide is designed to help the less experienced diagnose the cause of most marine diesel faults. Although aimed mainly at the typical 4-stroke, overhead valve, small to medium sized marine diesels, much of this information will still apply to all diesel engines regardless of size and design.

The Marine Diesel Engine an Introduction - YouTube

A basic diesel engine needs only a constant supply of clean fuel, plus air to provide oxygen for combustion. The amount of air needed is easy to under estimate - around one cubic metre per minute is required for every 10hp of engine power. Defective engine compartment ventilation, or clogged air filters, can therefore result in a loss of power.
