Recombinant DNA Principles and Methodologies - 1st Edition ...

The principle of recombinant DNA technology involved four steps. The four steps are: (1) Gene Cloning and Development of Recombinant DNA (2) Transfer of Vector into the Host (3) Selection of Transformed Cells and (4) Transcription and Translation of Inserted Gene.

Principle of Recombinant DNA Technology (4 Steps)

The recombinant DNA can be identified using various selection methods. For the first time bacteriophage was used to transfer the foreign DNA into E. coli cells. If the vector is bacteriophage, its replication in bacterial host would result in phage particles, each carrying an identical copy of target gene.

create a hybrid. The technology is made possible by two types of enzymes, restriction endonucleases and ligase. A restriction endonuclease recognizes a specific sequence of DNA and cuts within, or close to, that sequence.

Recombinant DNA - an overview | ScienceDirect Topics

Recombinant DNA technology is the joining together of DNA molecules from two different species. The recombined DNA molecule is inserted into a host organism to produce new genetic combinations that are of value to science, medicine, agriculture, and industry. Since the focus of all genetics is the gene, the fundamental goal of laboratory geneticists is to isolate, characterize, and manipulate genes.

Principles of Recombinant DNA Technology | SpringerLink

Recombinant DNA technology combines DNA from different sources to create a different sequence of DNA. Recombinant DNA technology is used in a wide range of applications from vaccine production to the production of genetically engineered crops. As recombinant DNA technology advances, technique precision must be balanced by ethical concerns.

The production of exact copies of a particular gene or DNA sequence using genetic engineering techniques is called gene cloning. The term "gene cloning," "DNA cloning," "molecular cloning," and "recombinant DNA technology" all refer to same technique. When DNA is extracted from an organism, all its genes are obtained.
