Schematic Raw Water Cooled Engine

Besides exposure to corrosive materials in the water, raw-water cooled engines suffered from another major drawback. They had a thermostat, just like all engines, but it was regulated at 145-150° F. This was done to minimize the possibility that salt in the salt water

Questions: 1) What are the differences between Fresh Water Cooling Systems

Access Free Schematic Raw Water Cooled Engine

MerCruiser

and Raw Water Cooling Systems. 2)
What is the Difference Between a Full &
Half Closed Cooling System? Response:
The term “Fresh Water Cooling” also
termed “Closed Cooling” can be
confusing as compared to Raw Water or
Open Cooling Systems, as these closed
systems circulate antifreeze and not
water.

The Martec is a retrofitted freshwater cooling system that is seen on many raw-water cooled engines. An electric pump circulates fresh water through the heat exchanger, cooled itself by the original raw water pump. A calorifier can be added into the fresh water circuit.
