Also, there are some diseases that have been historically surgical that are now medical and vice versa. Some may be surprised to learn that tuberculosis (TB) was once treated by surgically excising diseased lung tissue. TB is now, of course, mostly a medical disease. Diseases have also made the opposite switch from the medical to the surgical size.

Surgery is often used to get a tissue sample to diagnose Castleman disease (CD). A lymph node biopsy (described in Tests for Castleman Disease) is usually a minor procedure, and patients can often go home afterward. Surgery also works well to treat localized (unicentric) CD. The type of surgery depends on where the disease is located.
